PROFILE

A data science leader and hands-on builder working at the intersection of analytical thinking, AI systems, and product judgment. This portfolio demonstrates that approach through personal products, reproducible analysis, and experiments with explicit tradeoffs.

SELECTED PERSONAL WORK

Family OS ↗

Private prototype

A household context engine that turns source-backed obligations into traceable proposals for a human to approve.

`Agent workflows · Provenance · Human review`

The injury question ↗

Published analysis

Nine NFL seasons. Every team. A reproducible investigation of injury burden, playoff workload, and what the data can actually tell us.

`Statistical modeling · Held-out evaluation · Data storytelling`

Tend ↗

Native project

A privacy-first iPhone and Mac system for turning bounded communication context into reviewable follow-ups and family tasks.

`Context design · Privacy · Native product`

DropAlpha ↗

Internal decision tool

A collectibles opportunity and inventory system with deterministic unit economics, bankroll guidance, and exit routing.

`Decision support · Unit economics · Uncertainty`

HOW I APPROACH THE WORK

- **Frame the decision.** Start with the question and what would change the answer.
- **Show the evidence.** Make sources, assumptions, evaluation and uncertainty inspectable.
- **Design the handoff.** Put human review and clear boundaries into AI workflows.
- **Build to learn.** Use working prototypes to test usefulness and refine the next step.

Selected personal projects are separate from my work at Xero.
